

Basic Use Cases:

1. Able to create a task to add it into the To-do List.
2. Able to view the task in greater detail via a drop down bar.
3. Able to easily edit the task via a button.
4. Able to remove the task once done.
5. Able to archive task that are done.
6. Able to set dateline for the task.
7. Able to tag task and search for them using a search bar.

Execution Plan:

1. Set up basic crud operations using scaffolding.
2. Format application using stylesheet.
3. Add the tag system to the To-do List.
4. Add dateline to the list.
5. Further format the To-do List using the dropdown bar.
6. Add archiving system.
7. Add graphics like ticks.

Difficulties:

1. Learning everything from scratch, takes some time to get used to rails.
